Maths—Multiplying three numbers and factor pairs

This week the class have been learning all about factors. They have been fantastic at spotting patterns and using their knowledge of timetables to relate to factors.
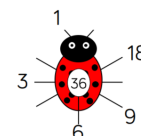

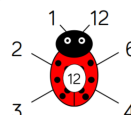

Make the target number of 84 using three of the digits below.

7	5	3	4	6	2

☐ × ☐ × ☐ = 84

Multiply the remaining three digits together, what is the product of the three numbers?

Here is an example of a factor bug for 12
Complete the factor bug for 36

1 12
2 6
3 4
12

1
18
3 9
6
36

Are all the factors in pairs?
Draw your own factor bugs for 16, 48, 56 and 35

English—Varjak Paw

Next week the class are going to write persuasive letters to Varjak urging him to stay at the house or go over the wall. They have been looking at imperative verbs and acting out their arguments to the class

Plea for Junk Modelling—Next week we are going to make models of the River Derwent to support the learning about The Lake district, mountains and rivers in geography.
 We are going to need cardboard, shoe boxes and newspaper. Please can you rummage through your recycling and bring in anything you can to help us.

Rhaea

OF THE WEEK

For being very responsible and demonstrating a mature attitude in and out of the classroom.
